The U.S. lift Truck division located in Cleveland has a skilled team knowledgeable in Sales, Purchasing, Marketing, Logistical and Technical Support.

Originally the domestic lift truck market in Korea was an open import enterprise. Korea Machinery Co. Ltd. started in 1960, to import fully assembled lift trucks as part of a domestic machinery expansion venture. Sales of these products were originally targeted to state-run firms, large scale organizations, and the armed forces. This ultimately led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun trade operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a forklift production plant was successfully completed. Continuous technical training grew to become the new focus for enhancing quality and product development.

Daewoo began the first domestic lift truck business in 1967, and quickly acquired a whopping 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's advanced technological enhancements combined with sales success placed them in a situation of considerable growth of their lift truck operations.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a joint venture project to help them in the highly competitive North American materials handling market. This joint-venture proved highly profitable for Daewoo and their forklift product sales expanded greatly. In 1984, the company completed construction of a new facility to help in producing high end value-added products for export. In 1993, the company had a global sales network and started exporting designs they had developed through in-house technology, as an independent brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into international marketplaces.
